E-garbage

Nowadays, every home produces electronic garbage (or e-garbage) – old TVs, computers, or cell phones we don't use anymore. However, when we throw these objects away, we probably don't know where they end up. The US journalist and photographer, Peter Essick, decided to follow e-garbage to several different countries around the world. In particular, Essick discovered that a

lot of e-garbage goes to Ghana. There, he saw mountains of old computers and other devices in the local markets. People resell some of them, but very little equipment works or can be repaired. Some e-garbage is used to recycle the parts inside.

These parts contain small amounts of metals such as copper or sometimes even gold. However, the process of recycling is very dangerous for the workers because it produces many toxic chemicals. As a result of his travels to investigate what happens to e-garbage, Peter Essick thinks that developed countries should stop exporting their e-garbage because it is not good for the environment and bad for people's health. He believes manufacturers need to produce more eco-friendly devices in the future.

19. The author suggests that people ignore....
20. According to the text, people in Ghana.....
21. It can be inferred from the text that Peter Essick.....
22. . The author suggests that people throw away....
23. It is inferred from the text that e-garbage.....
24. The text implies that recycling electronic parts.....
25. Explain the first conditional and write 2 examples
